

# Descrição do Cluster de Testes

George C. G. Barbosa

#### Tópicos

- Fontes utilizadas
- Ferramentas
- Testes (provisórios)

Cluster Hadoop e Cluster Spark

#### **Fontes**

- Setting up a scalable data exploration environment with Spark and Jupyter Lab
- Building our data science platform with Spark and Jupyter
- Hadoop documentation 2.9.2
- Spark documentation 2.4.0

#### **Ferramentas**

- Hadoop
- Jupyter
- Spark
- Livy

#### Hadoop

- Data lake
- Tolerância a falhas
- Acesso distribuído aos arquivos

## Jupyter

- JupiterHub
- Spark Magic
- Custom Kernel

#### **Cluster Hadoop**

- SSH
- Seleção manual de parâmetros
- Cada usuário executa seu próprio cliente

### Livy

- Spark Magic
- Kernels
- Sessões de Longa duração
- Falta do Autocompletar

Solução: Custom Kernel

- Standalone Cluster
- Scheduling
  - FIFO
  - Dynamic Resource Allocation

• Sem fila?

- Gerenciamento por executor
- Fila de processos

Cluster Spark

- Gerenciamento por executor
- Fila de processos

- Gerenciamento por executor
- Fila de processos

Cluster Spark

#### **Testes**

- Processo de longa duração
- Compartilhamento de recursos
  - 40+ Jobs a partir de 2 usuários diferentes

Application ID ▲	Name	Cores	Memory per	Submitted Time	User	State	Duration
Application ID A	Ivaille	Cores	Executor	Submitted Time	OSEI	State	Duration
app-20190225122038-0011	pyspark-	8	2.0 GB	2019/02/25	cluster	RUNNING	50.2 h
(kill)	<u>shell</u>			12:20:38			

#### Documentação

 https://github.com/cidacslab/cidacscluster/blob/master/documentation/ tutorial.md
